

MITERMASTER WORKSTATION

The reliable system for faster, easier, better miter cuts.

Increase your miter cutting production by up to 50%

When mitering is done on a daily basis, every minute counts.

That's why we developed a workstation that saves time without sacrificing quality.

Deliver reliably precise results year after year with this innovative setup.

WHAT IS A WORKSTATION?

An AccuGlide workstation is a stone rail saw with everything you need to accomplish a task in your shop. The miter cutting workstation provides all the tools and equipment to create a dedicated physical station in your shop where all your miter cutting will be done. Everything is quick to assemble and use on its working table, so it's also mobile enough to set up on the job.

HIGHER OUTPUT

Increase your shop's weekly miter cutting output by up to 50%. Cut miters on an average-sized kitchen in an hour less.

HAPPY CUSTOMERS

Clean cuts translate into tight laminations. Impress your customers with the high-end results you achieve.

RELIABLE DAILY PRODUCTION

Produce sharp miter cuts year after year. All our tools have been engineered for durability, and hand-assembled in the USA for over 20 years.

BULL STONE INC.

Middle Village, NY

"It's proven to be a great solution to the hold-up we were experiencing with miter cutting on our bridge saw. The cuts we're getting now with the AccuGlide are sharp and dead on."

ABSOLUTE MARBLE & GRANITE

Nipomo, CA

"We've been cutting with AccuGlide equipment for close to a decade now. We've found the system to be easy to use, economical, and cuts as good as any bridge saw. The MiterMaster is a breeze to use."

SOAPSTONE WERKS

Escondido, CA

"We are amazed at how fast, straight, and clean this AccuGlide saw cuts! We have used every type of sawing system over 25 years, and I can't say enough good things about this system. The miters are sharp enough to shave with!"

MERRIFIELD GRANITE & MARBLE

Springfield, VA

"Our AccuGlide miter workstation is much faster than our bridge saw and the cuts are much cleaner too. I would highly recommend AccuGlide tools to anyone in the stone fabrication industry."

AARON DECKER

Tarpon Springs, FL

"We just finished building a two tiered bar and grill station for a large apartment complex. The tops were 244" long and mitered on every exposed edge. Without using the AccuGlide saw and miter system, the job would have been almost impossible. The results are amazing and the setup takes almost no time. Highly recommended!"

WHAT'S INCLUDED

CLASSIC STONE SAW

The Classic AccuGlide stone saw gives you the precision we're famous for with a streamlined setup. It has a compact design and speedy setup suitable for any job. In addition to miters, it can make straight, edge and seam cuts.

ZOOM QT™ BLADE

Manufactured with a unique bridge saw style sandwich segment design. We've found it to have amazing speed performance while still delivering an extremely clean cut. This unique balance has made it a customer favorite.

MITERMASTER™ SAW ATTACHMENT SYSTEM

The MiterMaster attachment kit allows you to solidly place your AccuGlide saw and tracks on the work piece for perfect miter cuts. Achieve precise seams not achievable by hand cutting.

PACKAGE INCLUDES:

(2) Main Fixtures
Clamp on left and right edges of workpiece to hold tracks at perfect angle.

(1) Inside Corner Fixture
For L-shaped work pieces, use in place of left or right main fixture.

(1) In-line Support Fixture
Place on the center of workpiece edge under tracks for added stability.

(1) In-Line Support Leg
Place on ground and extend up to support bottom of tracks for added stability.

12.5' STANDARD TRACKS

Our classic stainless steel tracks for precise straight edge cutting on all stone surfaces.

7.5' QUICK-LOCK TRACKS

This integrated clamping rail can be used with c-clamps or suction cups.

WHAT'S INCLUDED

VERSATABLE™

Minimize the risk of breakage when mitering or polishing pieces of stone, large or small.

Quickly remove two of the center slats and you have instant access for working on under-mount sinks. Unfasten eight bolts to take down, and then easily reassemble the VersaTable™ on the job site in just a few minutes!

Built with the highest quality materials, the VersaTable™ is very sturdy and durable. Outfit your shop with the ultimate table!

Materials

- Powder coated steel legs and braces
- 3" structural aluminum channel beams
- Table top constructed of (9) 2" x 3" x 36" aluminum channel, surfaced with cement board
- Stainless steel hardware

Specifications

Total weight: 133 lbs.

Max Capacity: 400 lbs

Table top dimensions: 36" x 99"

MAX CUT LENGTH

12.5' Standard Tracks: 133" (330cm)

7.5' Quick-Lock Tracks: 73" (185cm)

MAX MITER MATERIAL DEPTH

7" blade: 3cm

8" blade: 3cm

CUTTING SPEED

1 - 4' per minute

MATERIAL COMPATIBILITY

- Granite
- Quartz
- Neolith™
- Dekton™
- Glass
- Quartzite
- Onyx
- Marble
- Soapstone
- and more

APPLICATIONS

- Kitchens
- Bathrooms
- Fireplaces
- Stairs
- Furniture

VERSATILITY IN CUT STYLES

Standard Miters
(Stones without pattern; tight Grains)

Bookmatch Miters
(Stones with pattern; veining; large crystal structure)

THE MITER WORKSTATION PROFILING OPERATION

The Miter Workstation is designed to be a standalone miter cutting station in your stone shop. By following a profiling operation in this dedicated workstation, you'll save time and get higher quality results..

FIGHT CHIPPED EDGES

A common approach to chips is to hide them by polishing in a heavy eased edge. But then you lose the sharp, high-end results you want.

AVOID CURVED CUTS

Even with a new bridge saw you'll get a curved cut when mitering any slab that's dished on one side, which happens on MOST slabs.

STRAIGHT, CHIP-FREE MITERS IN 2 STEPS

STEP ONE

Run an AccuGlide stone saw or bridge saw at full speed to cut the countertop and fascia miter strips at ninety degrees. Even with a dished slab, the cuts will remain straight at ninety degrees.

STEP TWO

Move the countertop and lamination strips to your Miter Workstation. Using your AccuGlide stone saw with MiterMaster attachment, clip the countertop edge to 45 degrees (see graphic below). The stability of the attachment will keep your cuts chip-free.

FEATHER MITER CUTTING TECHNIQUE

The Miter Workstation is designed to use the **feather miter cutting technique**. This reduces chips and divots and saves time in the final polish. What's the difference?

STANDARD MITER CUTTING

Standard miter cutting with a standard saw. Cutting a 45 degree angle into the top polished surface of a stone slab.

- + High impact when blade strikes polished surface
- + High vibration from blade and/or saw
- + Fragile and weak miter edge

FEATHER MITER CUTTING

Feather miter cutting with the AccuGlide. A micro quirk miter, where the blade strikes the unpolished edge of the stone 1/32" below the surface.

- + Less impact on rough, unpolished surface
- + 80% less vibration from AccuGlide saw and blade
- + Cleaner and sharper miter cuts
